A Project report on

TRADITIONAL HEALTH CARE METHODS

A Community Service Project Report Submitted to Jawaharlal Nehru
Technological University, Kakinada in Partial fulfilments of
for the Award of the Degree of

BACHELOR OF TECHNOLOGY IN COMPUTER SCIENCE AND ENGINEERING[BTECH]

Submitted by:

SYED.WASIMA

21HU1A42A2

UNDER ESTEEMED GUIDANCE OF:

R.SRAVANTHI[M.TECH]

**DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
[AI&ML]**

CERTIFICATE

This is to certify that the project work entitled “**TRADITIONAL HEALTH CARE METHODS**” is a bonafide work carried out by **Ms.SYED.WASIMA[21HU1A42A2]** Fulfillment for the award of the degree of Bachelor of Technology in **COMPUTER SCIENCE & ENGINEERING** of Jawaharlal Nehru Technological University, Kakinada during the year 2022- 2023. It is certified that all corrections/suggestions indicated for internal assessment have been incorporated in the report. The project report has been approved as it satisfies the academic requirements in respect of project work prescribed for the above degree.

FIG:INTERACTION WITH THE DOCTOR ABOUT TRADITIONAL HEALTH CARE METHODS

Acknowledgement

We write this Acknowledgement with the great honour,pride and pleasure to pay respects to all who enabled us directly or indirectly in reaching this stage.

We express our sincere thanks to our Beloved Chairman Dr **R.V.Krishnaiah**,vice president **G.M.Chowdary**,for providing support and a stimulated environment for completing our project.

We would ecspecially like to thank **M.Srinivasulu**,Director for providing us the resources for carrying out the project.We are grateful to **V.Dinesh Babu**,professor and Head of the Department of Computer Science and Engineering for his inspiration and above all the moral support and the constant encouragement in carrying out this project work.

We also thank our **Friends** for their invaluable help deduced by them during the course of the project.Finally,we would like to dedicate this to our **Parents** for their everlasting love and constant encouragement given by them during the period,even during miles apart.

Chapter 5: Outcomes Description

Chapter 6: Recommendations And Conclusions Of The
Mini Project.

CHAPTER 1: EXECUTIVE SUMMARY

The community service report shall have only a one-page executive summary. It shall include a brief description of the Community and summary of all the activities done by the student in CSP and five or more learning objectives and outcomes.

The community service report shall have only a one-page executive summary. It shall include a brief description of the Community and summary of all the activities done by the student in CSP and five or more learning objectives and outcomes .

I had done my community service project in the **Ponnur community**. I observed and studied about various **Traditional Health Care Methods** and their causes and effects.

I conducted a survey about my community project Traditional methods and interacted with different kinds of people and ages. They have given information about their knowledge on their individual health cares and methods. I visited and interacted with Homeo stores and observed what type of medicines are used. I

Learning Outcomes:

- 1.Different peoples Opinions about Traditional methods
- 2.Traditional plants
- 3.Traditional Medicines and their uses
- 4.Advantages of Traditional methods
- 5.Effectiveness of Traditional methods
- 6.Role of traditional medicines in health care system
- 7.Different types of Traditional medicines
8. Different types of Traditional methods
- 9.Medical palnts at houses
- 10.Oldest traditional methods

CHAPTER 2: OVERVIEW OF THE COMMUNITY

About the Community/Village/Habitation including historical profile of the community / habitation, community diversity, traditions, ethics and values.

Brief note on Socio-Economic conditions of the Community/Habitation.

PONNUR:

Ponnur is a city in Guntur district of the Indian state of Andhra Pradesh. It is a municipality and the headquarters of Ponnur Mandal and Ponnur revenue division. The city is renowned for art, culture, drama and hence, it is often referred with the nickname Andhra Paris. It is one of the twelve urban local bodies in Andhra Pradesh Capital Region and the twelfth most populous city in the state, with a population of 199,345 as of 2011. Ponnur City is also part of Andhra Pradesh Capital Region Development Authority (APCRDA). Ponnur, is a town and a Mandal in Guntur District of Andhra Pradesh, South India. It has a population of 149,839 (2001 census). It is located 16 miles of Guntur City for its rich historical, agricultural, cultural and literary legacy. It is the second largest town after Guntur in Guntur District. It has produced many famous poets, theatre artistes, scholars, actors, scientists and academicians. It is well known for the Vaikuntapuram temple which gets visited by an average of 35,000 devotees every month to get a glimpse of the Lord Venkateswara.

HISTORY OF PONNUR:

‘Andhra Paris’ Ponnur is one of the sacred places of Panchayati in the delta area of Krishna River. The Archaeological monuments revealed that the village ‘Teravali’ gradually became Tenali and it is also reputed for devotees, intellectuals, orators, artists and educationalists from ancient days.

An ancient Telugu manuscript entitled 'Ponnuru-Chandavolu Shasanam' was present in Potti Sreeramulu Telugu University Kilari Venkata Rosaiah of YSRCP party is the current MLA of the constituency, who won the 2019 Andhra Pradesh Legislative Assembly election. It is a municipality and the mandal headquarter of Ponnur mandal under Tenali revenue division. As of 2011 Census of India, the town had a population of 59,913 with 16,138 households. The total population constitute, 29,486 males and 30,427 — a sex ratio of 1032 females per 1000 males, higher than the national average of 940 per 1000. 5,507 children are in the age group of 0–6 year. The

average literacy rate stands at 78.33% with 42,617 literates, higher than the national average of 73.00%. **Civic Administration**

[Ponnur Municipality](#) oversees the civic needs of the town like, water supply, roads, sewage, garbage collection etc. It is classified as a *Grade-II* municipality which was established in 1964 as a *III-Grade* municipality. It has an extent of 25.64 km² (9.90 sq mi) with 31 wards. The town gets water from the [Krishna river](#), which is supplied through taps, bores etc. The town has both government and private hospitals which include, clinics, [nursing homes](#) and a [Government hospital](#) for public healthcare. It also maintains parks and playgrounds for recreational purpose.

Politics

Ponnur being a part of Ponnur mandal, falls under [Ponnur assembly constituency](#) of [Andhra Pradesh Legislative Assembly](#). Venkata Rosaiah Kilari is the present [MLA](#) of the constituency from [YSRCP](#). The assembly segment is in turn a part of [Guntur lok sabha constituency](#) and the present [Member of parliament](#) is [Galla Jayadev](#) of [Telugu Desam Party](#).

Economy

Ponnur is an important town for the nearby villages. The rural areas surrounding the town are mostly dependent on [agriculture](#). The farming is dominant with [paddy](#) cultivation and others crops include [ground nuts](#), [cotton](#), [betel](#) etc. There exists several other economic industries and occupations in the town such as, [brickworks](#), furniture making.

Government and politic

Civic Administration

Ponnur Municipality oversees the civic needs of the town like, water supply, roads, sewage,

garbage collection etc. It is classified as a *Grade-II* municipality which was established in 1964

as a *III-Grade* municipality. It has an extent of 25.64 km² (9.90 sq mi) with 31 wards. The town

gets water from the Krishna river, which is supplied through taps, bores etc. The town has both

government and private hospitals which include, clinics, nursing homes and a Government

hospital for public healthcare. It also maintains parks and playgrounds for recreational purpose

Politics.

Ponnur being a part of Ponnur mandal, falls under Ponnur assembly constituency of Andhra Pradesh Legislative Assembly. Venkata Rosaiah Kilari is the present MLA of the

constituency from YSRCP. The assembly segment is in turn a part of Guntur lok sabha

constituency and the present Member of parliament is Galla Jayadev of Telugu Desam

Party.

Culture

Legend about Ponnuru | Once there lived two brahmans namely *Kasibhatlu* who was childless and his sister's son *Nanduri Gunugovindu* with deformed haunchback. They went on pilgrimage to *Benares* where *Kasibhatlu* moved with *compassion*, promised Govindu if ever daughter should be born to him, she would be given to him in marriage. Instantly Govindu called upon *Bhava Narayana Swamy*, a sacred river and certain trees growing on the banks as witnesses. Brahmans returned to Ponnuru. A daughter was born to *Kasibhatlu*. When She grew up, Govindu claimed the fulfillment of promise by *Kasibhatlu*. *Kasibhatlu* was reluctant to keep his word. Witnesses were called upon by Govindu. One night, when *Kasibhatlu* slept, *Bhava Narayana Swamy* appeared to remember promise. In morning when awoke, *Kasibhatlu* saw *Ganges* and *trees* at door, because of overflowed river. Warned by witnesses *Kasibhatlu* gave his daughter to Govindu in marriage. There are a few notable people from the town with their contributions to various fields such as, [N. G. Ranga](#), [Pragada Kotaiah](#). The town has an auditorium and a function hall for cultural events of the town.

There are many religious worship centers in the town like, temples, mosques and churches. Most notable religious structures are, the temples of *Sakshi Bhavanarayana* and *Sahasra Lingeswara*, a single stone carved statues of 24 ft (7.3 m) Anjaneya and 29 ft (8.8 m) .

Transport

The town has a total road length of 140.05 km (87.02 mi). [State Highway 48](#), also known as *Guntur-Bapatla-Chirala Road* passes through Ponnur, which connects it with the district headquarter, [Guntur](#). The *Ponnur–Repalle Road* connects [National Highway 216](#) at [Chandole](#). The state government operates [APSRTC](#) bus services to the nearby towns and villages. Nearest railway station is [Nidubrolu](#),] a *D–category* station in the [Vijayawada railway division](#) of [South Central Railway zone](#).

Education

Zilla parishad high school is the prominent one, run by Panchayat Raj department under the government of Andhra Pradesh. PBN is famous college for intermediate and degree courses. The primary and secondary school education is imparted by government, aided and private schools, under the *School Education Department* of the state. The medium of instruction followed by different schools are English and Telugu.

The town has both government and private educational institutions with a total of 34 [primary](#), 3 upper primary and 12 [high schools](#). There are also two government run [junior colleges](#). **Ponnur is a town in Guntur district of the Indian state of Andhra Pradesh.** There was a festival on full moon day in May. A road to Chandole goes south-east and comes to Nidubrolu, where there is a temple with a stone bearing inscription recording the erection of 90 temple in A.D. 1132.

Ponnur is famous for **two major temples – Sakshi Bhavanarayana Swamy and Veeranjaneya temples**. There is also a temple for grama devata, taking care of the prosperity of this town. **Kolleru Lake** is one of the largest freshwater lakes in India located in state of Andhra Pradesh and forms the largest shallow freshwater lake in Asia (with 245 km² of lake area and 302 km² of total Ramsar designated wetland), 15 kilometers away from the Eluru and 65 km from Rajamahendravaram,.

British politics, similarly ponnur also was always the severe center of Andhra Pradesh Politics.

Hence many people referred to ponnur as the Downing Street of Andhra, in views of its place, role and importance in Andhra Politics. It is second educational centre in Guntur district by

having several Schools, Junior Colleges and Degree Colleges with various Post-Graduate courses. The city is notable for drama, fine arts, literature and poetry. The iconic Martyr's Memorial at Ranarang Chowk denotes the impact of the city on the Indian freedom struggle during the Quit India Movement. The people of ponnur had responded to Mahatma Gandhi's call and organised a bandh on 12 August 1942.

AGRICULTURE:

ponnur thrives on trade and agriculture. Irrigation in the Western Delta, the region in which the lies, is supported by water from the Krishna river. Among major crops the main crop cultivated in ponnur is paddy. As the land is very fertile in this area and also many other crops like Maize, Banana, Turmeric, Wheat, Green chilies ETC.

Demographics

As of 2011 Census of India, the town had a population of 59,913 with 16,138 households. The total population constitute, 29,486 males and 30,427 —a sex ratio of 1032 females per 1000 males, higher than the national average of 940 per 1000. 5,507 children are in the age group of 0–6 years. The average literacy rate stands at 78.33% with 42,617 literates, higher than the national average of 73.00%.

CHAPTER 3: COMMUNITY SERVICE PART

Description of the Activities undertaken in the Community during the Community Service Project. This part could end by reflecting on what kind of values, life skills, and technical skills the student acquired.

Life Skills:

1. Managing time
2. Ability to make decisions
3. The importance of environmental preservation.
4. Resilience and adaptability.

ACTIVITY LOG FOR THE FIRST WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person InCharge Signature
Day - 1	Studied about different Traditional Health care methods	About Different Traditional Health care methods	
Day - 2	History of Traditional methods	About the starting of Traditional methods	
Day - 3	Visited different houses	Traditional methods	
Day - 4	Survey about Traditional methods	Traditional methods	
Day -6	Questions on Traditional methods	Questionare	

WEEKLY REPORT

WEEK – 2 (From Dt.24-08-2022 to Dt.30-08-2022)

Objective of the Activity done:A brief research on the Traditional health care methods.
Detailed Report:I had completed the complete research on Traditional Health care Methods.
Traditional alternative medicine. This field includes the more mainstream and accepted forms of therapy, such as acupuncture, homeopathy, and Oriental practices
These therapies have been practiced for centuries worldwide. Traditional alternative medicine may include: • Acupuncture • Ayurveda • Homeopathy • Naturopathy • Chinese or Oriental medicine
. Nutritional excess and deficiency have become problems in today's society, both leading to certain chronic diseases
Over the centuries, man has gone from a simple diet consisting of meats, fruits, vegetables, and grains, to a diet that often consists of foods rich in fats, oils, and complex carbohydrates
External energy. Some people believe external energies from objects or other sources directly affect a person's health.
Attention will be focused on the depletion of plant resources on earth in meeting the increasing demand for herbs.

ACTIVITY LOG FOR THE SECOND WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person InCharge Signature
Day - 1	Studied about different Traditional Health Medicines	Learned about different Traditional medicines	
Day - 2	The history of Traditional medicine	History of Medicine	
Day - 3	Visited Medical store	Medicinal overview	
Day - 4	Survey by different people	Traditional medicines	
Day - 5	Survey by different people	Traditional medicines	
Day -6	Visited Medicine store	Medicinal overview	

WEEKLY REPORT

WEEK – 2 (From Dt.31-08-2022 to Dt.06-09-2022)

Objective of the Activity done:I have Studied about different Traditional Health Medicines and their uses.
Detailed Report:I have gained some knowledge about the Traditional Health Care Methods.
Learned about the history of Traditional Health Care Methods.
In recent years, increasing numbers of people have been choosing herbal medicines or products to improve their health conditions, either alone or in combination with others
According to the World Health Organization, 75% of the world's populations are using herbs for basic healthcare needs
Moreover, many conventional/pharmaceutical drugs are derived directly from both nature and traditional remedies distributed around the world.
The practice of herbal medicine entails the use of more than 53,000 species, and a number of these are facing the threat of extinction due to overexploitation
This paper aims to provide a review of the history and <i>status quo</i> of Chinese, Indian, and Arabic herbal medicines in terms of their significant contribution to the health promotion in present-day over-populated and aging societies.
Herbalism is a traditional medicinal or folk medicine practice based on the use of plants and plant extracts 1. Chinese Herbal Medicine 2. Indian Herbal Medicine 3. Arabic Herbal Medicine 4. The Theoretical Advantages of Herbal Medicine

ACTIVITY LOG FOR THE THIRD WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In Charge Signature	
Day - 1	Study about Traditional method- Homeopathy	Learned about homeopathy		
Day - 2	The history and evolution of Homeo	History of Homeo		
Day - 3	Survey of Homeopathy	Homeopathy		
Day - 4	Questions on Homeo medicine	Questionare		
Day - 5	Survey of Homeopathy	Homeopathy		
Day -6	Visited Homeo stores	Homeo Overview		

WEEKLY REPORT

WEEK – 3 (From Dt.07-09-2022 to Dt.14-09-2022)

Objective of the Activity done:I have Study about Traditional method-Homeopathy and its importance.
Detailed Report:I have gained some knowledge about the Traditional Health Care Methods.
Homeopathy is a complementary or alternative medicine. This means that homeopathy is different from treatments that are part of conventional Western medicine in important ways.
An alternative approach to medicine based on the belief that natural substances, prepared in a special way and used most often in very small amounts, restore health.
• Homoeopathy is Safe. The doses of Homoeopathic medicines are prepared in a standardized, well-controlled and hygienic environment. ... • Homoeopathic Medicines are Palatable and Easy to Administer. ... • Homoeopathy Cures. ... • Homoeopathic Medicines are Easily Available
Homeopathy is used to "treat" an extremely wide range of conditions, including physical conditions such as asthma and psychological conditions such as depression.
Homeopathy has an edge over other systems of treatment available for allergic disorders for the following reasons: Homoeopathy strengthens the immune system and restores the state of health permanently.
• Auto-isopathy. This is treatment with remedies made from the patient's own body substances which have been potentised according to homeopathic manufacturing processes. ... • Classical homeopathy. ... • Clinical homeopathy. ...

ACTIVITY LOG FOR THE FOURTH WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In Charge Signature
Day - 1	Study about Traditional method- Allopathy	Overview of Allopathy	
Day - 2	The history of Allopathy	History of Allopathy	
Day - 3	Survey of Allopathy	Allopathy	
Day - 4	Questions on Allopathic medicine	Questionare	
Day - 5	Survey of Allopathy	Allopathy	
Day -6	Visited Allopathic store	Allopathy Overview	

WEEKLY REPORT

WEEK – 4 (From Dt.15-09-2022 to Dt.21-09-2022)

Objective of the Activity done:I have Study about Traditional method-Allopathy and its importance.
Detailed Report:I have gained some knowledge about the Traditional Health Care Methods.
A system in which medical doctors and other healthcare professionals (such as nurses, pharmacists, and therapists) treat symptoms and diseases using drugs, radiation, or surgery.
Also called biomedicine, conventional medicine, mainstream medicine, orthodox medicine, and Western medicine. antibiotics (penicillin, amoxicillin, vancomycin, augmentin) blood pressure medications (diuretics, beta-blockers, calcium channel blockers, ACE inhibitors) diabetes drugs (metformin, sitagliptin, DPP-4 inhibitors, thiazolidinediones)
Allopathic medicine, or allopathy, is an archaic term used to define science-based modern medicine. There are regional variations in usage of the term. In the United States, the term is used to contrast with osteopathic medicine, especially in the field of medical education.
Prefer Allopathy Therapy because of convenient to hectic Lifestyle and Easily availability of allopathy medicine Customer Prefer Ayurvedic Therapy because of its cheap price followed by no side effect on human body and inclusion of natural ingredients in ayurvedic medicine.
Allopathic medicines are of following types: Liquid. The active part of the medicine is combined with a liquid to make it easier to take or better absorbed. ... • Tablet. The active ingredient is combined with another substance and pressed into a round or oval solid shape. ... • Capsules. ... • Topical medicines. ... • Suppositories. ... • Drops. ... • Inhalers. ...

ACTIVITY LOG FOR THE FIFTH WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In Charge Signature
Day - 1	I visited Nidubrolu and interacted with some people about Traditional Health care Methods	Interaction with people in Nidubrolu	
Day - 2	I enquired about their Medications (Traditional or English)	Interaction with people	
Day - 3	I went to medical stores and enquired people about the advantages of Traditional medications	Visited to medical store	
Day - 4	I enquired some Senior citizens about their opinion on Traditional methods	Enquired old people	
Day - 5	I interacted with Mrs.Devika and enquired about their health condition and medication	Traditional medicine is affordable to everyone	
Day -6	I interacted with Mrs.Sathwika a 67 years old and enquired about their health condition and medication	Traditional medicine is far more better than other medicines	

WEEKLY REPORT

WEEK - 5 (From Dt.22-09-2022 to Dt.27-09-2022)

Objective of the Activity done:I have Study about Traditional method-Allopathy and its importance
Detailed Report:I have gained some knowledge about the Traditional Health Care Methods.
I visited Nidubrolu and interacted with some people about Traditional Health care Methods and Interacted with the people about their health conditions and medications.
I enquired about their Medications (Traditional or English) and health conditions.
I went to medical stores and enquired people about the advantages of Traditional medications and also to the customers about the Traditional Medications.
I enquired some Senior citizens about their opinion on Traditional methods and done some questionare about traditional care methods and its uses,importance and also advatages and disadvantages.
I interacted with Mrs.Devika and enquired about their health condition and medication and her health condition at the time of covid and now. Enquired the uses about Traditional medicine is affordable to everyone. Traditional medicine consists of health knowledge, skills and practices based on indigenous beliefs and experiences, which use animal, herbal or mineral-based medicines and/or spiritual therapies for the prevention, diagnosis and treatment of physical and mental illnesses and for the general maintenance of well-being.
I interacted with Mrs.Sathwika a 67 years old and enquired about their health condition and medication. Traditional medine is far more better than other medicines
There are four Sacred Medicines: Tobacco, cedar, sage, and sweetgrass. These are traditional medicines that have physical qualities for medicinal purposes, and a spiritual aspect used in traditional healing and ceremonies. Care and attention should be given when harvesting Sacred Medicines.

ACTIVITY LOG FOR THE SIXTH WEEK

Day & Date	Brief description of the daily activity	Learning Outcome	Person In Charge Signature
Day - 1	I created a google form and recorded the various answers from students	I will be able to identify different types of feedbacks from my classmates	
Day - 2	I conducted awareness program in Chebrolu engineering college	Awareness program performed at Chebrolu engineering college	
Day - 3	I collected more information about other traditional methods	More Information collected about Traditional methods	
Day - 4	Survey of other Traditional methods and Medicines	Naturopathy,Siddha,Unani..	
Day - 5	Visited Rural areas and enquired about Traditional medicines	No side effects with Traditional medicines	
Day -6	Visited the Hospital	Conducted survey from the Patients	

WEEKLY REPORT

WEEK - 6 (From Dt.28-09-2022 to Dt.04-10-2022)

Objective of the Activity done:I have Study about Traditional method-Allopathy and its importance. I created a google form and recorded the various answers from the students and I will be able to identify different types of feedbacks from my classmates.
Detailed Report:I have gained some knowledge about the Traditional Health Care Methods. I conducted awareness program in Chebrolu engineering college.
I collected more information about other traditional methods. Types of traditional methods: 1.Ayurveda 2.Homeopathy 3.Allopathy 4.Naturopathy 5.Yoga 6.Siddha 7.Unani
Survey of other Traditional methods and Medicines.Done a survey of all Traditional methods and enquired about medical plants in their houses. Naturopathy,Siddha,Unani.....
I Visited Rural areas and enquired about Traditional medicines. Done a questionnaire about the traditional medicines and other medicines in which they preferred the Traditional health cares.
I Visited the Hospital and enquired about the medicine and health conditions of the patients. Known about some traditional methods like 1.Aloevera 2.Clove 3.Ginger 4.Garlic 5.Mint
There are ways to keep ourselves strong: Get regular exercise ,Avoid too much stress

CHAPTER 5: OUTCOMES DESCRIPTION

Details of the Socio-Economic Survey of the Village/Habitation Attach the questionnaire prepared for the survey.

This study highlights complex perceptions patients have around how SES affects their health care. These results offer opportunities to **reduce health care disparities through better understanding of their impact on the individual patient-provider relationship**. Socioeconomic status (SES) underlies three major determinants of health: **health care, environmental exposure, and health behavior**. In addition, chronic stress associated with lower SES may also increase morbidity and mortality.

Describe the problems you have identified in the community

The people in our Community has less knowledge on these problems:

1. Usage of Traditional methods
2. Usage of Traditional Medicines
3. Advantages of Traditional Medicines
4. Traditional Medicines impact on health
5. History of Ayurveda
6. History of other Traditional methods.

COMPUTER SCIENCE AND ENGINEERING TRADITIONAL HEALTH CARE METHODS

Name :

1. WHAT ARE TRADITIONAL HEALTH CARE METHODS DO YOU PREFER TO CURE DISEASES?

☐ homeopathy ☐ Ayurvedam ☐ Naturopathy ☐ others

2. ANYONE OF YOUR FAMILY MEMBER USING TRADITIONAL HEALTH CARE METHODS?
YES/NO

IF YES: How Progress it is?

3. DO YOU HAVE ANY HEREDATORY DISEASES?

A) DIABETES B) HIGH BLOOD PRESSURE C) OBESITY

4. HOW OFTEN DO YOU GET A HEALTH CHECKUP?

- A) ONCE IN 3 MONTHS
- B) ONCE IN 6MONTHS
- C) ONCE IN A YEAR
- D) ONLY WHEN NEEDED

5. DO YOU HAVE ANY MEDICAL PLANTS AT YOUR HOME? YES/NO

6. WHAT DO U SAY ABOUT YOUR HEALTH CONDITION AT THE TIME OF COVID?

7. HOW LIKELY ARE YOU TO RECOMMEND TRADITIONAL HEALTH CARE METHODS TO YOUR FRIENDS AND FAMILY?

8. DOES THIS SURVEY HELPS YOU? YES/NO

Practices known as traditional medicines include traditional European medicine, traditional Chinese medicine, traditional Korean medicine, traditional African medicine, Ayurveda, Siddha medicine, Unani, ancient Iranian medicine, traditional Iranian medicine, medieval Islamic medicine. Ayurveda, Siddha, Unani and Yoga, Naturopathy and Homoeopathy. Though Homoeopathy came to India in 18th Century, it completely assimilated in to the Indian culture and got enriched like any other traditional system hence it is considered as part of Indian Systems of Medicine.

There is no plant in the world which is non -medicinal or which cannot be used as medicine be used as medicine”. India has 16 Agro climatic zones, 45000 different plant species out of which 15000 are medicinal plants, of which 500 species are mostly used in the preparation of drugs. The Indian Systems of Medicine, particularly Ayurveda, Siddha, Unani and Homoeopathy medicine largely use plant base ancient texts had documented medicinal uses of large number of plants. These plants are being used for preparation of medicines for centuries.

Nattuvaidyam:

Nattuvaidyam was a set of indigenous medical practices that existed in India before the advent of allopathic or western medicine.^[37] These practices had different sets of principles and ideas of the body, health and disease. There were overlaps and borrowing of ideas, medicinal compounds used and techniques within these practices.^[38] Some of these practices had written texts in vernacular languages like Malayalam, Tamil, Telugu, etc. while others were handed down orally through various mnemonic devices. Ayurveda was one kind of nattuvaidyam practised in south India.^[39] The others were kalarichikitsa (related to bone setting and musculature),^[40] marmachikitsa (vital spot massaging), ottamoolivaidyam (single dose medicine or single time medication),^[41] chintamanivaidyam and so on. When the medical system was revamped in twentieth century India, many of the practices and techniques specific to some of

these diverse nattuvaidyam were included in Ayurveda.[42]

A **home remedy** (sometimes also referred to as a **granny cure**) is a treatment to cure a disease or

ailment that employs certain spices, herbs, vegetables, or other common items.

Home remedies

may or may not have medicinal properties that treat or cure the disease or ailment in question, as

they are typically passed along by laypersons (which has been facilitated in recent years by

the Internet). Many are merely used as a result

A new trend has, however, been noticed that foreign countries have evinced interest in medicinal plants available in India and well documented in the present article, indicating the formulation in which they are used. A number of medicinal plants and their uses have been patented by foreign countries. There has been criticism by the people and in the press on this growing trend of patenting of our medicinal Plants and their uses. Some of the well known plants like kala zeera, Amaltas, Indian Mustared, Kareal, Brinjal, Neem and Gudmar etc. have patents. Some of the patents have been successfully contested by India. India has century's old heritage of medicinal plants and herbal medicines for curing human illness and promotion of health in tribal and rural areas. Medicinal plants are often, the only easily accessible health care alternative for the most of our population and traditional medicines remained a part of our integral health system. Indigenous people have shown evidences of historical continuity of resource use and possess a broad base knowledge of the complex ecological system existing in the vicinity of their habitat. Thus there exists an intensive relationship between the two entities i.e. forest and tribals.

This relationship has been more static. It is always in flux of change. The life, tradition, culture of tribals has remained almost static since last several hundreds of years. The Knowledge accumulated by them through a long series of observations from one generation to another is transmitted through oral communication for power possessed by medicinal plants in cure of various diseases and ailment. It is a well-known fact that Traditional Systems of medicines always played important role in meeting the global health care needs. They are continuing to do so at present and shall play major role in future also. The system of

medicines which are considered to be Indian in origin or the systems of medicine, which have come to India from outside and got assimilated in to Indian culture are known as Indian Systems of Medicine. India has the unique distinction of having six recognized systems of medicine in this category. They are - Ayurveda, Siddha, Unani and Yoga, Naturopathy and Homoeopathy. Though Homoeopathy came to India in 18th Century, it completely assimilated in to the Indian culture and got enriched like any other traditional system hence it is considered as part of Indian Systems of Medicine. Apart from these systems, there are large numbers of healers in the folklore stream who have not been organized under any category.

According to Sharma, who shed some light on “contextualizing” both the use of traditional medicine and the vast gaps between western and indigenous approaches to medicine? To understand the role of the “Shaman” and to know anything of his genius in using plants, one must be prepared to accept the possibility that when he tells of moving into realms of the spirit, he is not speaking in metaphor. With the dexterity of a modern chemist.

Nattuvaidyam:

Nattuvaidyam was a set of indigenous medical practices that existed in India before the advent of allopathic or western medicine.^[37] These practices had different sets of principles and ideas of the body, health and disease. There were overlaps and borrowing of ideas, medicinal compounds used and techniques within these practices.^[38] Some of these practices had written texts in vernacular languages like Malayalam, Tamil, Telugu, etc. while others were handed down orally through

various mnemonic devices. Ayurveda was one kind of nattuvaidyam practised in south India.^[39] The others were kalarichikitsa (related to bone setting and musculature),^[40] marmachikitsa (vital spot massaging), ottamoolivaidyam (single dose medicine or single time medication),^[41] chintamanivaidyam and so on. When the medical system was revamped in twentieth century India, many of the practices and techniques specific to some of these diverse nattuvaidyam were included in Ayurveda.^[42]

Home remedies

A **home remedy** (sometimes also referred to as a **granny cure**) is a treatment to cure a disease or ailment that employs certain spices, herbs, vegetables, or other common items. Home remedies may or may not have medicinal properties that treat or cure the disease or ailment in question, as they are typically passed along by laypersons (which has been facilitated in recent years by the Internet). Many are merely used as a result .

Traditional medicine (also known as indigenous or folk medicine) comprises medical aspects of traditional knowledge that developed over generations within the folk

beliefs of various societies before the era of modern medicine. Traditional health methods may be informal, such as taboos and traditions passed through generations. Your grandmother might have told you that going outside without dressing warmly would result in a cold, or that drinking chicken soup helps cure colds. These traditions, or sayings, are ways of maintaining or achieving health. The age-old traditional health care practices are still relevant and are followed by communities across the countries. India's contribution remains exemplary in the growth of traditional health care systems.

This relationship has been more static. It is always in flux of change. The life, tradition, culture of tribals has remained almost static since last several hundreds of years. The Knowledge accumulated by them through a long series of observations from one generation to another is transmitted through oral communication for power possessed by medicinal plants in cure of various diseases and ailment. It is a well-known fact that Traditional Systems of medicines always played important role in meeting the global health care needs. They are continuing to do so at present and shall play major role in future also.

India has 16 Agro climatic zones, 45000 different plant species out of which 15000 are medicinal plants, of which 500 species are mostly used in the preparation of drugs. The Indian Systems of Medicine, particularly Ayurveda, Siddha, Unani and Homoeopathy medicine largely use plant base ancient texts had documented medicinal uses of large number of plants. These plants are being used for preparation of medicines for centuries.

Short-term and long-term action plan for possible solutions for the problems identified and that could be recommended to the concerned authorities for implementation.

Many herbs and minerals used in [Ayurveda](#) were described by ancient Indian herbalists such as [Charaka](#) and [Sushruta](#) during the 1st millennium BC. The first [Chinese herbal](#) book was the *[Shennong Bencao Jing](#)*, compiled during the [Han Dynasty](#) but dating back to a much earlier date, which was later augmented as the *[Yaoxing Lun](#)* (*Treatise on the Nature of Medicinal Herbs*) during the [Tang Dynasty](#). Early recognised Greek compilers of existing and current herbal knowledge include [Pythagoras](#) and followers, [Hippocrates](#), [Aristotle](#), [Theophrastus](#), [Dioscorides](#) and [Galen](#).

Translations of the early Roman-Greek compilations were made into German by [Hieronymus Bock](#) whose herbal, published in 1546, was called *Kreuter Buch*. The book was translated into [Dutch](#) as *Pemptades* by [Rembert Dodoens](#) (1517–1585), and from Dutch into [English](#) by [Carolus Clusius](#), (1526–1609), published by [Henry Lyte](#) in 1578 as *A Nievve Herball*. This became [John Gerard's](#) (1545–1612) *Herball or General Historie of Plantes*. Each new work was a compilation of existing texts with new additions.

FIG: Creating Awareness On Importance of Ayurveda

Ayurveda, the most widely used system in traditional Indian medicine, emphasizes holistic medicine, which takes the body, mind, and spirit as a whole. It is based on the principle that human beings achieve physical, mental, and emotional health through harmonious coexistence with nature. A new trend has, however, been noticed that foreign countries have evinced interest in medicinal plants available in India and well documented in the present article, indicating the formulation in which they are used. A number of medicinal plants and their uses have been patented by foreign countries. There has been criticism by the people and in the press on this growing trend of patenting of our medicinal Plants and their uses. Some of the well known plants like kala zeera, Amaltas, Indian Mustared, Kareal, Brinjal, Neem and Gudmar etc. have patents. Some of the patents have been successfully contested by India. India has century's old heritage of medicinal plants and herbal medicines for curing human illness and promotion of health in tribal and rural areas. Medicinal plants are often, the only easily accessible health care alternative for the most of our population and traditional medicines remained a part of our integral health system. Indigenous people have shown evidences of historical continuity of resource use and possess a broad base knowledge of the complex ecological system existing in the vicinity of their habitat . Thus there exists an intensive relationship between the two entities i.e. forest and tribals.

Description of the Community awareness programme/s conducted w.r.t the problems and their outcomes.

Traditional Medical Plants:

1.Garlic: Garlic (*Allium sativum*) is a [species](#) of [bulbous](#) flowering plant in the [genus](#) *Allium*.

Its close relatives include the [onion](#), [shallot](#), [leek](#), [chive](#), [Welsh onion](#) and [Chinese onion](#). It is native to [South Asia](#), [Central Asia](#) and northeastern [Iran](#) and has long been used as a seasoning worldwide, with a history of several thousand years of human consumption and use. It was known to [ancient Egyptians](#) and has been used as both a food flavoring and a [traditional medicine](#). [China](#) produces 76% of the world's supply of garlic

Cultivation

Garlic is easy to grow and can be grown year-round in mild climates. While sexual propagation of garlic is possible, nearly all of the garlic in cultivation is propagated [asexually](#), by planting individual cloves in the ground. In colder climates, cloves are best planted about six weeks before the soil freezes. The goal is to have the bulbs produce only roots and no shoots above the ground. Harvest is in late spring or early summer.

2.MINTS

The mint family (Lamiaceae) is known for its aromatic members, especially the mints and balms. Plants in the family are characterized by square stems, paired and simple leaves, and two-lipped open-mouthed tubular flowers. Our survey showed

that Lamiaceae species are mainly used against gastrointestinal disorders and microbial infections. Chemical analysis of the EOs obtained from these plants allowed us to identify seventy-five compounds describing more than 90% of the

relative composition of each EO.

3. GINGER

In traditional medicine, it is used for treating headaches, indigestion, nausea, vomiting, and cancer. In addition, it is widely used to treat autoimmune diseases, hypertension, hypercholesterolemia, hyperuricemia, bacterial infections, and cancer. Ginger is distantly related [dicots](#) in the genus [Asarum](#) are commonly called wild ginger because of their similar taste.

Although used in [traditional medicine](#) and as a [dietary supplement](#), there is no good evidence that consuming ginger or its [extracts](#) has any effect on human health or as a treatment for diseases. In 2019, world production of ginger was 4.1 million [tonnes](#), led by India with 44% of the world total.

4. CLOVE: Cloves are full of antioxidants. These compounds help your body to fight free radicals, which damage your cells and can lead to disease. By removing free radicals from

your system, the antioxidants found in cloves can help reduce your risk of developing heart disease, diabetes, and certain cancers.

Report of the mini-project work done in the related subject w.r.t the habitation/village.
A mini-project work in the related subject w.r.t the habitation/village. For ex., a student of Botany may do a project on Organic Farming or Horticulture or usage of biofertilizers or biopesticides or effect of the inorganic pesticides, etc. A student of Zoology may do a project on Aquaculture practices or animal husbandry or poultry or health and hygiene or Blood group analysis or survey on the Hypertension or survey on the prevalence of diabetes, etc.

Cloves were first traded by the [Austronesian peoples](#) in the [Austronesian maritime trade network](#) (which began at around 1500 BC, later becoming the [Maritime Silk Road](#) and part of the [Spice Trade](#)). The first notable example of modern clove farming developed on the east coast of [Madagascar](#), and is cultivated in three separate ways, a [monoculture](#), agricultural parklands, and [agroforestry](#) systems

5. Bay Leaves

Traditionally, it has been used as herbal medicine against number of diseases such as rheumatism, sprains, indigestion, earaches, and to enhance perspiration . It was reported by different researches that bay leaf can also be used to treat diabetes and migraine. drinking bay leaf water is good for you as it is an excellent source of antioxidants, vitamins and other essential minerals. In addition, drinking bay leaf water can improve your immune system, increase body metabolism and can help reduce one's weight. Bay leaf is a spice commonly used to flavor soups and meat dishes due to its light, herbal flavor. It is sometimes sold in stores in a powder or as a fresh leaf, but it is most commonly found as a dry, whole leaf. The bay leaf is added during the cooking process and taken out before a dish is served since the leaf itself is difficult to chew and digest. Contrary to popular myth, the bay leaf is not poisonous

Uses of Bay Leaf

The classical use of bay leaf is an essential ingredient in soups, stews, and stuffings. Furthermore, it is a crucial ingredient in teas, oils, and liquors. In addition, it has acted as herbal medicine against numerous diseases for thousands of years. Apart from culinary and medicinal uses, bay leaves have various applications. Some of the other benefits of bay leaves are listed below:

6. Coriander

Coriander is taken by mouth for stomach and intestinal problems including upset stomach, nausea, diarrhea, intestinal gas, constipation, and irritable bowel syndrome (IBS). It is also taken by mouth for convulsions, insomnia, anxiety, and to treat infections caused by bacteria and fungus. Coriander (*Coriandrum sativum* L.) is a very popular medicinal plant that belongs to Apiaceae family in taxonomic classification, which is widely used as a spice and also in pharmacy and in food industries.

Coriander might stimulate the gut and increase the production of stomach acid. This might help people with conditions such as indigestion, constipation, or intestinal gas. Coriander may also reduce muscle spasms in the gut. This might help treat stomach conditions such as diarrhea. Coriander may also lower blood sugar by stimulating insulin production. Coriander may also lower blood pressure by causing blood vessels to dilate and working like a "water pill" (diuretic). Coriander is an excellent remedy to manage high blood pressure. It is packed with heart-friendly fibres. Studies have claimed that constituents from coriander interact with calcium ions and the neurotransmitter acetylcholine, which helps relax tension in blood vessel.

7. Aloe Vera

Aloe vera is a medicinal plant with a long history, complex constituents, and various pharmacological activities. Many studies have shown that A. vera plays an important role in promoting wound healing. Traditionally, the clear gel from the

Aloe plant is rubbed on the skin as an ointment to treat wounds and burns. The green part of the leaf can be made into a juice or dried and taken orally as a laxative. Antioxidants are important for health. Aloe vera gel [Trusted Source](#) powerful antioxidants belonging to a large family of substances known as polyphenols. These polyphenols, along with several other compounds in aloe vera, help inhibit the growth of certain bacteria that can cause infections in humans.

Different Types of Traditional Methods:

*HOMEOPATHY-

Homeopathy is a complementary or alternative medicine. This means that homeopathy is different from treatments that are part of conventional Western medicine in important ways. It's based on a series of ideas developed in the 1790s by a German doctor called Samuel Hahnemann. An alternative approach to medicine based on the belief that natural substances, prepared in a special way and used most often in very small amounts, restore health. In the 21st century a series of [meta-analyses](#) have shown that the therapeutic claims of homeopathy lack scientific justification. As a result, national and international bodies have recommended the withdrawal of government funding for homeopathy in healthcare. National bodies from Australia, the United Kingdom, Switzerland and France, as well as the [European Academies' Science Advisory Council](#) and the [Russian Academy of Sciences](#) have all concluded that

homeopathy is ineffective, and recommended against the practice receiving any further funding.

FIG:Creating Awareness on using Homeopathy.

Homeopathy achieved its greatest popularity in the 19th century. It was introduced to the United States in 1825 with the first homeopathic school opening in 1835. Throughout the 19th century, dozens of homeopathic institutions appeared in Europe and the United States. During this period, homeopathy was able to appear relatively successful, as other forms of treatment could be harmful and ineffective. By the end of the century the practice began to wane, with the last exclusively homeopathic medical school in the United States closing in 1920. During the 1970s, homeopathy made a significant comeback, with sales of some homeopathic products increasing tenfold. The trend corresponded with the rise of the [New Age movement](#), and may be in part due to [chemophobia](#), an irrational preference for "natural" products, and the longer consultation times homeopathic practitioners provided.

In the 21st century a series of [meta-analyses](#) have shown that the therapeutic claims of homeopathy lack scientific justification. As a result, national and international bodies have recommended the withdrawal of government funding for homeopathy in healthcare. National bodies from Australia, the United Kingdom, Switzerland and France, as well as the [European](#)

[Academies' Science Advisory Council](#) and the [Russian Academy of Sciences](#) have all concluded that homeopathy is ineffective, and recommended against the practice receiving any further funding.

2.ALLOPATHY-

A system in which medical doctors and other healthcare professionals (such as nurses, pharmacists, and therapists) treat symptoms and diseases using drugs, radiation, or surgery. Also called biomedicine, conventional medicine, mainstream medicine, orthodox medicine, and Western medicine. Allopathic medicine, or allopathy, is an archaic term used to define [science-based modern medicine](#).^{[1][2]} There are regional variations in usage of the term. In the United States, the term is used to contrast with [osteopathic medicine](#), especially in the field of medical education. In India, the term is used to distinguish modern medicine from [Ayurveda](#), [homeopathy](#), and other similar alternative/traditional medicine, especially when comparing treatments and

drugs.

FIG: Awareness on Effectiveness of Allopathy

A study released by the [World Health Organization](#) (WHO) in 2001 defined "allopathic medicine" as "the broad category of medical practice that is sometimes called Western medicine, [biomedicine](#), [evidence-based medicine](#), or modern medicine." The WHO used the term in a global study in order to differentiate Western medicine from [traditional medicine](#), and from complementary/[alternative medicine](#), noting that in certain areas of the world "the legal standing of practitioners is equivalent to that of allopathic medicine" where practitioners are certified in both complementary/alternative medicine and Western

3.NATUROPATHY-

Naturopathy, or naturopathic medicine, is a form of [alternative medicine](#).^[1] A wide array of [pseudoscientific](#) practices branded as "natural", "non-invasive", or promoting "self-healing" are employed by its practitioners, who are known as naturopaths. Difficult to generalize, these treatments range from outright [quackery](#), like [homeopathy](#), to widely accepted practices like [psychotherapy](#).^{[2][3][4]} The ideology and methods of naturopathy are based on [vitalism](#) and [folk medicine](#) rather than [evidence-based medicine](#), although practitioners may use techniques supported by evidence.

Naturopathic practitioners commonly recommend against following [modern medical practices](#), including but not limited to [medical testing](#), [drugs](#), [vaccinations](#),

and [surgery](#). Instead, naturopathic practice relies on unscientific notions, often leading naturopaths to diagnoses and treatments that have no factual merit.

Naturopathy is considered by the [medical profession](#) to be ineffective and harmful, raising [ethical](#) issues about its practice. In addition to condemnations and criticism from the medical community, such as the [American Cancer Society](#), naturopaths have repeatedly been denounced as and accused of being [charlatans](#) and practicing quackery.

Naturopaths often recommend exposure to naturally occurring substances, such as [sunshine](#), [herbs](#) and certain foods, as well as activities they describe as natural, such as [exercise](#), [meditation](#) and [relaxation](#). Naturopaths claim that these natural treatments help restore the body's innate ability to heal itself without the adverse effects of conventional medicine. However, "natural" methods and chemicals are not necessarily safer or more effective than "artificial" or "synthetic" ones, and any treatment capable of eliciting an effect may also have deleterious [side effects](#).

Naturopathy is a distinct primary health care system that stresses upon the body's self-healing mechanism. Naturopathy uses a wide range of therapies to support human wellness. The foundation of Naturopathy is based on the greatness of exercise, sunlight, freshwater, stress management, healthy diet, and so on. It is the science of disease diagnosis, treatment, and cure using natural therapies including dietetics, botanical medicine, homeopathy, fasting, exercise, lifestyle counseling, detoxification, and chelation, clinical nutrition, hydrotherapy, naturopathic manipulation, spiritual healing, environmental assessment.

[4.YOGA-](#)

Yoga-like practices are first mentioned in the [Rigveda](#) as a non-Brahminical practice. Yoga is referred to in a number of the [Upanishads](#). The first known appearance of the word "yoga" with the same meaning as the modern term is in the [Katha Upanishad](#) which was probably composed between the fifth and third centuries BCE. Yoga continued to develop as a systematic study and practice during the fifth and sixth centuries BCE in ancient India's [ascetic](#) and [Śramaṇa](#) movements. The most comprehensive text on Yoga, the [Yoga Sutras of Patanjali](#), date to the early centuries of the [Common Era](#); [Yoga philosophy](#) became known as one of the six [orthodox philosophical schools](#) ([Darśanas](#)) of Hinduism in the second half of the first millennium CE. [Hatha yoga](#) texts began to emerge between the ninth and 11th centuries, originating in [tantra](#).

The term "yoga" in the Western world often denotes a modern form of Hatha yoga and a [posture-based physical fitness, stress-relief and relaxation technique](#),¹ consisting largely of the [asanas](#); this differs from traditional yoga, which focuses on [meditation](#) and release from worldly attachments. It was introduced by [gurus](#) from [India](#) after the success of [Swami Vivekananda](#)'s adaptation of yoga without asanas in the late 19th and early 20th centuries. Vivekananda introduced the *Yoga Sutras* to the West, and they became prominent after the 20th-century success of hatha yoga.

There is no consensus on yoga's chronology or origins other than its development in ancient India. There are two broad theories explaining the origins of yoga. The linear model holds that yoga has Vedic origins (as reflected in Vedic texts), and influenced Buddhism. This model is mainly supported by Hindu scholars. According to the synthesis model, yoga is a synthesis of indigenous, non-Vedic practices with Vedic elements. This model is favoured in Western scholarship.

That way, yoga can support the healing process and help the person experience symptoms with more centeredness and less distress.

- Yoga improves strength, balance and flexibility. ...
- Yoga helps with back pain relief. ...
- Yoga can ease arthritis symptoms. ...
- Yoga benefits heart health. ...
- Yoga relaxes you, to help you sleep better.

It began as a spiritual practice but has become popular as a way of promoting physical and mental well-being. Although classical yoga also includes other elements, yoga as practiced in **Short-term and long-term action plan for possible solutions for the problems identified and that could be recommended to the concerned authorities for implementation.**

- Films and Videos on TRADITIONAL HEALTH CARE METHODS, sourced from program within the government and outside must be shown to community.
- Create awareness on OLDEN DAYS MEDICINES and their impact on Health, and create a platform for local action on these issues
- Display of posters and information leaflets related to theme of OLDEN DAYS MEDICINES.
- Conducting a participatory analysis of hospitals and Health situation of the community and village.
- A brief discussion on the seasonality of disease must be done, to identify the links between the pattern and seasonality of diseases and water and sanitation challenges.

- Overall cleanliness and sanitation hygiene practices in the village, in School and Anganwadi, in preparation and serving of Mid Day meal and hot cooked food, must be discussed.

- A poster campaign and a talk on the importance of cleanliness must be done.

- Use of safe and clean drinking water, and use of safe water for other daily purposes. Safe

storage and handling of drinking water must be explained.

- Regular Hand washing with soap – at all critical times must be promoted.

- Safe management of solid and liquid waste management – with emphasis on recycling.

- Linkages between diseases and hygiene and sanitation, particularly fecal contamination,

which is most critical part of these linkages, should be discussed.

- A plan for converting open defecation areas in to community utility spaces like, parks etc.

- A local culture of hand-washing with soap is fostered and supported.

- A Street play/rally in collaboration with village school to create awareness on hand washing.

- Large Village level meeting on importance of hand washing and demonstration of hand washing.

- A culture of hand washing with soap is nurtured among children, and a process for developing school sanitation champions of school and village, must be started.

- Building awareness and understanding in community about sanitation and hygiene practices at individual and household level, and impart necessary knowledge about it.

- Demonstration of hygienic practices in handling water and food, and during process of preparing food.

the United States typically emphasizes physical postures (asanas), breathing techniques (pranayama), and meditation (dyana).

We have visited nearby homeopathy clinics and collected the information regarding to survey. There is no specific name for this treatment in olden days later Germany has developed and implement this method.

CHAPTER 6: RECOMMENDATIONS AND CONCLUSIONS OF THE MINI PROJECT

TRADITIONAL HEALTH CARE METHODS

Recommendations:

Integration of traditional medicine in health systems will result in increased coverage of, and access to, health care. The promotion of positive traditional medicine practices and the use of traditional medicines of proven efficacy and safety will supplement other efforts to achieve health for all.

Plants are being used for preparation of medicines for centuries .

A new trend has, however, been noticed that foreign countries have evinced interest in medicinal plants available in India and well documented in the present article, indicating the formulation in which they are used. A number of medicinal plants and their uses have been patented by foreign countries. There has been criticism by the people and in the press on this growing trend of patenting of our medicinal Plants and their uses. Some of the well known plants like kala zeera, Amaltas, Indian Mustared, Kareal, Brinjal, Neem and Gudmar etc. have patents. Some of the patents have been successfully contested by India . India has century's old heritage of medicinal plants and herbal medicines for curing human illness and promotion of health in tribal and rural areas. Medicinal plants are often, the only easily accessible health care alternative for the most of our population and traditional medicines remained a part of our integral health system. Indigenous people have shown evidences of historical continuity of resource use and possess a broad base knowledge of the complex ecological system existing in the vicinity of their habitat. Thus there exists an intensive relationship between the two entities i.e. forest and tribals.

TM can be considered to belong to three main categories . These are (i) codified medical systems, (ii) folk medicine, and (iii) allied forms of health knowledge . Codified medical systems include great traditions which have evolved over 3-4 millennia and include Ayurveda, Siddha, and Unani in the Indian subcontinent and traditional Chinese medicine and acupuncture in China. These medical traditions have a unique understanding of physiology, pathogenesis, pharmacology, and pharmaceuticals which are different from Western biomedicine . Perhaps because of this systematic approach these medical systems have been professionalized within the last millennia. Folk medicine is those traditional knowledge

systems which are more often orally transmitted, have been generated by communities over centuries, and use components of the ecosystem which are locally available and accessible . Folk medicine has not been formalized and is diverse and adaptable based on changing contexts. There are several similarities in the folk/indigenous medicine of widely differing, geographically distinct, communities. Allied forms of health knowledge include techniques which are related to wellbeing though they are not purely medical systems, such as yoga, tai-chi, qi-gong, and different meditations and breathing techniques . The WHO published a global atlas to compile information on TM globally, in terms of policy, regulations, financing, education, research, practice, and use . This provides a regional overview of TM, whether the systems are codified medical systems, folk medicine, or allied forms of knowledge. The description includes the use of TM in the African region, the Americas, the South East Asian region, the Western Pacific region (including Japan and the Republic of Korea), the European region, Eastern Mediterranean region, and Australian region. Globally the interest in TM, specific to that region as well as of other geographic areas, has increased due to easy accessibility, flexibility, relatively low cost, low levels of technological input, and relatively low side effects (WHO, 2002). Hence there is a definite need to mainstream TM into public health care. According to the WHO some of the major policy challenges include safety, efficacy, quality, and rational use of TM. Various policy measures have been and are being applied to the use of TM, in order to increase its acceptability, safety, and efficacy

Ayurveda, Siddha, Unani and Yoga, Naturopathy and Homoeopathy are the most used and believed Traditional Health Care Methods. One of the most striking differences between traditional and modern medicines is the legal protection given to knowledge. Traditional practitioners have historically shared their knowledge and experience freely — defining 'open-access' before the term even existed. Ayurveda, the most widely used system in traditional Indian medicine, emphasizes holistic medicine, which takes the body, mind, and spirit as a whole. It is based on the principle that human beings achieve physical, mental, and emotional health through harmonious coexistence with nature.

Herbal medicines, which include herbs, herbal materials, herbal preparations, and finished herbal products that contain parts of plants or other plant materials as active ingredients, are the most popular and lucrative forms of TM.

Traditional medicine is not only effective in treating psychosomatic illnesses, however. Many practitioners of traditional medicine have a solid knowledge of herbs and of their effects in healing organically based illness as well.

***AYURVEDA-**

Ayurveda, a natural system of medicine, originated in India more than 3,000 years ago. The term Ayurveda is derived from the Sanskrit words ayur (life) and veda (science or knowledge). Thus, Ayurveda translates to knowledge of life. Ayurveda, the traditional medical system of India, has delineated three categories of fundamental regulatory principles of the body, mind, and behavior. These three categories, called doshas, are named Vata, Pitta, and Kapha.

Ayurveda believes that the entire universe is composed of five elements: Vayu (Air), Jala (Water), Aakash (Space or ether), Prithvi (Earth) and Teja (Fire). These five elements (referred to as Pancha Mahabhoota in Ayurveda) are believed to form the three basic humors of human body in varying combinations.

It's based on the belief that health and wellness depend on a delicate balance between the mind, body, and spirit. Its main goal is to promote good health, not fight disease. But treatments may be geared toward specific health problems.

Your ayurvedic morning routine at a glance. Get up before 6:00 a.m. Wash your face. Brush your teeth and clean your tongue. Gandusha (oil pulling) Drink water – empty your bladder and bowel. Ayurvedic medicine encourages whole-body healing, which includes physical, mental, and emotional health. This can include practices like yoga, meditation, mindful eating, sleep hygiene, spending time by yourself and with others, and managing your work-life balance .

The original conception of Ayurveda in its entirety is essentially linked to Dhanwantari who is considered as God of Hindu Medicine. Dhanwantari is considered a mythical deity born with ambrosia in one hand and Ayurveda on the other at the end of the churning of milk ocean.

Health Benefits of Ayurveda

Toxins in the Body are Reduced. You Learn to Clear Up Energy. Better Health at a Cellular Level. Stronger Digestion.

CONCLUSION:

Traditional medicine refers to the knowledge, skills and practises based on the theories, beliefs and experiences indigenous to different cultures, used in the maintenance of health and in the prevention, diagnosis, improvement or treatment of physical and mental illness. Contrary to those beliefs, however, traditional medicine has proven to be quite effective in treating both chronic diseases and psychological problems, especially those associated with stress, which frequently stem from social alienation, anxiety or loss of self-esteem.

Traditional medicine is a passive or limited treatment but it provides an error free treatment for those symptoms without any side effects. Ayurveda is considered as one of the oldest of the traditional systems of medicine (TSMs) accepted worldwide. The ancient wisdom in this traditional system of medicine is still not exhaustively explored.

Traditional medicine has been an integral resource for health for centuries in communities around the world, and it is still a mainstay for some with inequities in access to conventional medicine. The most common methods of preparation were: decoction (40.4%), infusion (28.5%), raw (17.4%), poultice (6.3%), dry (2.3%), juice (3.1%), maceration (0.7%), and fumigation (0.7%). The five elements are Wood, Fire, Earth, Metal and Water.

Around 80% of the world's population is estimated to use traditional People want natural products and want to have more control over their health. They turn to complementary and alternative medicine to relieve common symptoms, improve their quality of life and protect against illness and diseases in a holistic way. medicine. A prominent traditional healing system in the world, Traditional Arabic & Islamic Medicine (TAIM), refers to healing practices, beliefs, and philosophy incorporating herbal medicines, spiritual therapies, dietary practices, mind-body practices, and manual techniques, applied singularly or in combination to treat.

Natural Remedies Rooted in the Ancient Islamic & Arab World

Anise,Black Cumin,Fennel Seed,Frankincense,Licorice,Olive. Pomegranate. St john's wort. Improvised many practices such as home-made herbal and medicinal tonics, dietary restrictions, and amulets to ward off bad spirits. They also have adopted practices such as male circumcision, cupping, bloodletting, cauterization and ligaturing. There are four Sacred Medicines: Tobacco, cedar, sage, and sweetgrass. These are traditional medicines that have physical qualities for medicinal purposes, and a spiritual aspect used in traditional healing and ceremonies. Care and attention should be given when harvesting Sacred Medicines.

Echinacea. (Leaf, stalk, root) ,Feverfew. (Leaf) ,Garlic. (Cloves, root) ,Ginger. (Root) ,Ginkgo. (Leaf) ,Ginseng. (Root) .Goldenseal. (Root, rhizome).

Although written records about medicinal plants dated back at least 5,000 years to **the** Sumerians, who described well-established medicinal uses for such plants as laurel, caraway, and thyme , archeological studies have shown that the practice of herbal medicine dates as far back as 60,000 years ago in Iraq and 8,000 .

Hippocrates is considered to be the father of modern medicine because in his books, which are more than 70. He described in a scientific manner, many diseases and their treatment after detailed observation.Traditional medicine consists of health knowledge, skills and practices based on indigenous beliefs and experiences, which use animal, herbal or mineral-based medicines and/or spiritual therapies for the prevention, diagnosis and treatment of physical and mental illnesses and for the general maintenance of well-being.

Traditional medicine consists of health knowledge, skills and practices based on indigenous beliefs and experiences, which use animal, herbal or mineral-based medicines and/or spiritual therapies for the prevention, diagnosis and treatment of physical and mental illnesses and for the general maintenance of well-being.) Home remedies and popular knowledge of herbs and other medicinal substances make up a large portion of traditional medicine in Africa. For this reason, many elderly people might be labelled as traditional healers since they possess some common knowledge about how to treat ailments using herbs. However, for more than rudimentary complaints, “real” healers are consulted. In general, traditional healers in Africa often undertake training from another existing healer after experiencing a “divine call”. In Ghana, there are many types of healers who vary in their approach to diagnosis and treatment. The most common type of healer is the priest or priestess of deities and gods. These healers are responsible for curing organic and spiritually-based diseases and often employ healing techniques such as divination and rituals. Sacred or faith healers use prayers, herbal medicine, and incantation.) In addition,

secular healers or traditional pharmacists prepare and use herbal medicine from specific parts of plants such as selected leaves or roots. Finally, plant drug peddlers are located in most towns and villages; these individuals sell herbal medicines in various locations such as bus stops and street corners. Specialization among healers is common; some healers, like bone setters, focus on specific illnesses and treatments. Both male and females can be healers, although there are normally gender-specific healing roles; in particular, female healers tend to treat primarily women and children and may serve as traditional birth attendants.) While some healers practice full time, some pursue healing as a secondary occupation.

India has a long history of traditional medicine, and Ayurveda is the most representative system. Similar to traditional Chinese medicine, Ayurveda is a life science derived from experience. It emphasizes that human health requires both personalized medicine and a holistic approach. This article takes Ayurveda as an example to introduce traditional Indian medicine, hoping to provide readers with a preliminary understanding of the development of traditional medicine in India. The basic theories of Indian medicine are the five elements theory and the three humoralisms theory. The five elements theory is a natural philosophy in Vedic culture that is used in medicine to explain human physiology. The five elements theory holds that everything in the world is composed of five basic elements—Prithvi (earth), Jala (water), Agni (fire), Vayu (air), and Akasha (ether)—that supplement the corresponding elements in the human body after being ingested. According to the three humoralisms theory, there are three kinds of humoralisms—(Tridosha) gas (Vata), bile (Pitta), and mucus (Kapha)—the balance of which determines the health and disease status of the human body. Disease is caused by internal and external factors leading to an imbalance of the three humoralisms, and the treatment is to restore their balance by means of medicine and diet therapy.^{2,3} Later, seven kinds of tissues (Saptadhatus) (Rasa, Rakta, Mamsa, Meda, Asthi, Majja, and Shukra—that is, chyle, blood, flesh, fat, bone, marrow, and sperm/ovum) were added, all of which were thought to be derived from food. Others incorporated malas: Purisha, Mutra, and Sweda (i.e., feces, urine, and sweat). In this way, a relatively complete theoretical system has been formed, holding that disorders of humoralism, body composition, and excreta are the sources of disease. As an organism, the tissues of the human body are formed by the combination and transformation of these five basic elements. Whether one is healthy or sick depends on whether the whole body system is in balance, including whether all parts of the body are in balance with each other. Both

internal and external factors can disrupt the balance of nature and lead to disease. Imbalances can be caused by overeating, bad habits, and ignoring rules for healthy living. At the same time, abnormal seasons, incorrect exercise, improper use of sensory organs, and adverse effects of body and mind will also disrupt the existing normal balance. The basic treatment methods can be summed up as “body cleansing” and “mind cleansing.” By adjusting the diet, the body and mind system can be restored to balance, and bad habits and behaviors can be corrected; or, disorders of the body can be regulated by drugs.

Drug therapy

The drugs used are mainly animals, minerals, and marine drugs. In clinical practice, the drugs used are single or compound. The properties of the drugs stimulate the functions of specialized organs, exert the natural activity of medicinal plants, and stimulate the natural healing power of the body. In addition, Indian herbal therapy has a very old history. This therapy mainly uses the oil extracted from herbs to remove toxins from the body and restore the body to a natural balance.

Psychotherapy

Ayurvedic medicine can calm people’s minds and divide mental energy into three types: Satwa, Rajas, and Tamas.

India is known for its traditional medicinal systems—Ayurveda, Siddha, and Unani. Medical systems are found mentioned even in the ancient Vedas and other scriptures. The Ayurvedic concept appeared and developed between 2500 and 500 BC in India. The literal meaning of Ayurveda is “science of life,” because ancient Indian system of health care focused on views of man and his illness. It has been pointed out that the positive health means metabolically well-balanced human beings. Ayurveda is also called the “science of longevity” because it offers a complete system to live a long healthy life. It offers programs to rejuvenate the body through diet and nutrition. It offers treatment methods to cure many common diseases such as food allergies, which have few modern treatments. However, one should be aware that Ayurvedic nutrition is not a “magic bullet” system but requires the full participation of the patient to succeed. It is an interactive system that is user-friendly and educational. It teaches the patient to become responsible and self-empowered. Ayurveda is not a nutritional system for those seeking an escape or excuse to further abuse their body or mind. It is a system for empowerment, a system of freedom, and long life.

Food is the major source for serving the nutritional needs, but with growing modernization some traditional methods are being given up . Hence, the modern food habits are affecting the balanced nutrition. There is an ever widening gap in nutrient intake due to which normal life is no longer normal. However, affluence of working population with changing lifestyles and reducing affordability of sick care, in terms of time and money involved, are some of the forces that are presently driving people towards thinking about their wellness. India is the largest producer of medicinal plants. There are currently about 250,000 registered medical practitioners of the Ayurvedic system, as compared to about 700,000 of the modern medicine. In India, around 20,000 medicinal plants have been recorded; however, traditional practitioners use only 7,000–7,500 plants for curing different diseases. The proportion of use of plants in the different Indian systems of medicine is Ayurveda 2000, Siddha 1300, Unani 1000, Homeopathy 800, Tibetan 500, Modern 200, and folk 4500. In India, around 25,000 effective plant-based formulations are used in traditional and folk medicine. More than 1.5 million practitioners are using the traditional medicinal system for health care in India. It is estimated that more than 7800 manufacturing units are involved in the production of natural health products and traditional plant-based formulations in India, which requires more than 2000 tons of medicinal plant raw material annually. More than 1500 herbals are sold as dietary supplements or ethnic traditional medicines .

Alternative medicines are being used by those people who do not use or cannot be helped by conventional medicinal system. Some common medicinal plants having nutraceutical potential and their primary use in traditional medicine.

Student Self-Evaluation for the Community Service Project

Student Name: SYED WASIMA

Registration No: 21HU1A42A2

Period of CSP: From:24-08-2022 To:4-10-2022

Date of Evaluation:

Please rate your performance in the following areas:

Rating Scale: Letter grade of CGPA calculation to be provided

1	Oral communication	1	2	3	4	5
2	Written communication	1	2	3	4	5
3	Proactiveness	1	2	3	4	5
4	Interaction ability with community	1	2	3	4	5
5	Positive Attitude	1	2	3	4	5
6	Self-confidence	1	2	3	4	5
7	Ability to learn	1	2	3	4	5
8	Work Plan and organization	1	2	3	4	5
9	Professionalism	1	2	3	4	5
10	Creativity	1	2	3	4	5

EVALUATION

Internal Evaluation for the Community Service Project

Objectives:

- To facilitate an understanding of the issues that confront the vulnerable / marginalized sections of society.
- To initiate team processes with the student groups for societal change.
- To provide students an opportunity to familiarize themselves with the urban / rural community they live in.
- To enable students to engage in the development of the community.
- To plan activities based on the focused groups.
- To know the ways of transforming society through systematic programme implementation.

Assessment Model:

- There shall only be internal evaluation.
- The Faculty Guide assigned is in-charge of the learning activities of the students and for the comprehensive and continuous assessment of the students.
- The assessment is to be conducted for 100 marks.
- The number of credits assigned is 4. Later the marks shall be converted into grades and grade points to include finally in the SGPA and CGPA.
- The weightings shall be:
 - Activity Log 20 marks ○ Community Service Project Implementation 30 marks ○ Mini Project Work 25 marks ○ Oral Presentation 25 marks
- Activity Log is the record of the day-to-day activities. The Activity Log is assessed on an individual basis, thus allowing for individual members within groups to be assessed this way. The assessment will take into consideration the individual student's involvement in the assigned work.
- While evaluating the student's Activity Log, the following shall be considered -
 - a. The individual student's effort and commitment.
 - b. The originality and quality of the work produced by the individual student.
 - c. The student's integration and co-operation with the work assigned.
 - d. The completeness of the Activity Log.
- The assessment for the Community Service Project implementation shall include the following components and based on Weekly Reports and

Outcomes Description

- a. Details of the Socio-Economic Survey of the village/habitation.
- b. Problems identified.
- c. Community Awareness Programs organized.
- e. Suggested Short-Term and Long-Term Action Plan.
